GODET

Getting-started guide

The digital maintenance log for your machinery fleet

Everything you need to keep your fleet's log from today: first steps, installing on each device and answers to common questions.

Start in 5 steps

1 **Create your garage**

"Create my garage" on godet.app: your name, your email, then the company name, country and currency. The 15-day trial starts right away, no credit card needed.

2 **Add your machines**

"+ Machine": a short code (PE-01), the type, make, model and the current hour meter. Two due dates are created automatically: service and the annual safety check. Already have a log in Excel? Import it in one go (menu → Excel).

3 **Set the due dates**

In the machine card → Due dates: service every 250 or 500 h, inspection every year... Godet works out the next date from each machine's real usage and turns it orange, then red.

4 **Log the first job**

The "Entry" button in the machine card or in workshop mode: type, date, hour meter, costs, photos. Linked to a due date, the entry renews it automatically.

5 **Invite your team**

Settings → Team: one invitation link per person, with their role (admin, mechanic, operator). Then stick a QR label in each cab (menu → QR labels).

Install the app

Godet installs straight from the website, no app store needed. An icon appears on your home screen and Godet opens full screen, like an app. Updates are automatic.

iPhone and iPad

With Safari

1. Open godet.app in Safari and sign in.
2. Tap the Share button (the square with an arrow pointing up).
3. Scroll down and tap “Add to Home Screen”.
4. Tap “Add”: the Godet icon appears on your home screen.

Android

With Chrome

1. Open godet.app in Chrome and sign in.
2. Tap the ⋮ menu at the top right.
3. Tap “Install app” (or “Add to Home screen”).
4. Confirm: the Godet icon appears with your apps.

Computer

With Chrome or Edge

1. Open godet.app and sign in.
2. Click the install icon at the right of the address bar (a screen with an arrow).
3. Click “Install”.
4. Godet opens in its own window and shows up in the Start menu or the Dock.

Firefox and other browsers work too: just bookmark godet.app.

Day to day

Read the hour meter

Machine card → “Hours”, or the “Hours” button in workshop mode. The meter can only go up. Tip: “Read from a photo” reads the figure for you; check it before saving.

Log quickly on site

The “Workshop mode” button shows the fleet as a list, without 3D: big buttons for an entry or a reading, even with gloves on. A scanned QR label opens the right machine directly.

No network

On a device you’ve used before, the garage opens even offline. Entries and readings are sent automatically when the network is back (badge “2 entries waiting”).

Fix a mistake

An entry can be edited or withdrawn with a reason. Once withdrawn it stays visible, struck through: that’s what makes the log count during an inspection.

Know what a machine costs

Machine card → Costs: parts, labour and downtime over 12 months, month by month. The card’s overview also shows the cost per operating hour.

Print a log

Machine card menu → “Print the log”: the full log as a PDF, for an inspection, an appraisal or a sale.

Get reminded of due dates

Settings → Reminders: an email in the morning or a summary on Monday, only when there's something to do.

Ask the assistant

The "Assistant" button at the top of the garage: "Which services are overdue?", "How much did CH-02 cost this year?", "How do I invite a mechanic?".

Know where a machine is

Switch on entry location (Settings → Company). The machine card then shows the last known location, with a link to the map.

A machine is sold

Machine card menu → "Archive machine": it leaves the showroom, its log stays viewable and printable (Settings → Archived machines).

After the trial

Settings → Subscription: choose the plan by number of machines (from CHF 29 a month). Without a subscription the garage becomes read-only: nothing is deleted.

Hire out a machine (Rental option)

Calendar: menu → Rental. Booking, check-out report signed by the customer, then check-in report compared with check-out; the PDF report goes to the customer. In the garage, the machine sheet shows whether it is on hire, booked or available.

Rental option

For machine hire companies: a rental calendar and check-out and check-in reports signed on site. Option at +29 CHF per month, included in the 15-day trial.

1. Turn on the option

Settings → Subscription → "Rental option". During the trial it is already on. The garage menu then shows "Rental".

2. Set up rental

Settings → Rental: upload your general rental terms as a PDF (the customer must accept them before signing) and, if you wish, an address that receives a copy of every report.

3. Book a machine

Rental → "New booking", or tap an empty cell in the calendar: machine, dates, customer, site, delivery or collection. Godet refuses a machine already booked or on hire for that period.

4. Check-out report

On the day: check items (OK, Defect, N/A), fuel, hour meter read from the photo, accessories, required photos (front, rear, sides, hour meter, fuel gauge) and up to 20 photos and 2 videos. The customer accepts the terms and signs on screen, and so do you: the machine is now "On hire".

5. Check-in report

On return, each item is compared with check-out: a new defect shows in red, hire hours are calculated. Add charges (fuel, cleaning, damage) and reservations, then have it signed: the rental is closed and the machine's hour meter is updated. Machine broken down? Choose "Broken down": a repair is opened in the log and its next bookings are shown hatched in red in the calendar until the repair is finished.

6. PDF report

After each signature a PDF report is emailed to the customer (with the accepted terms) and filed in the machine's documents. Rental → the rental → "Report" to view, print or resend it.

Need help?

First ask the garage assistant: it knows Godet and your fleet. Otherwise **write to us (godet.app/contact)**; an idea for an improvement? That's what the **ideas box** is for.
